## Badge LW

- Two-way voice calls
- Amber alert
- 'Man down' detection
- Proof of presence
- One-touch SOS button
- Speed Dials/Check-in

### Hello and welcome to Oysta

Oysta lead the way in lone-worker technology. Oysta solutions are designed to track, locate, and connect lone workers to 24/7 assistance, and are relied upon by organisations from all industry sectors throughout the UK, Asia and Europe.

### Introducing the Badge

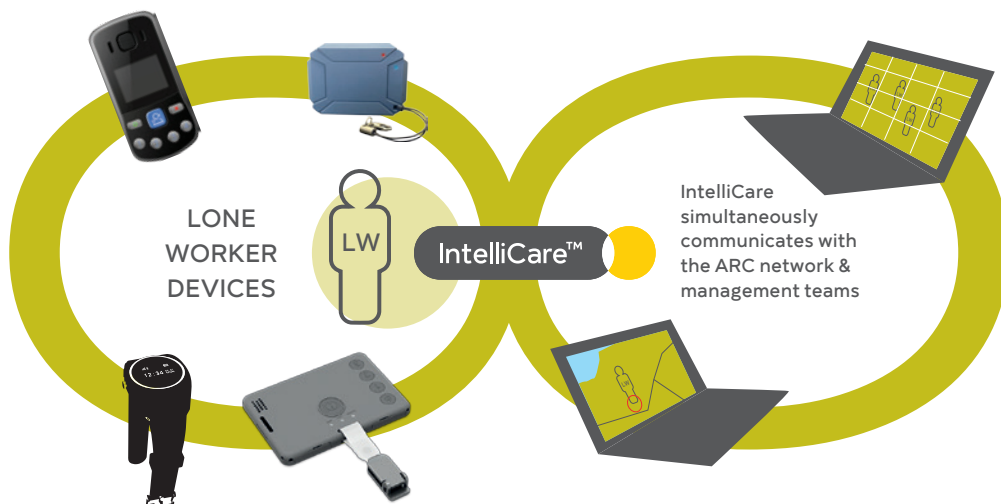

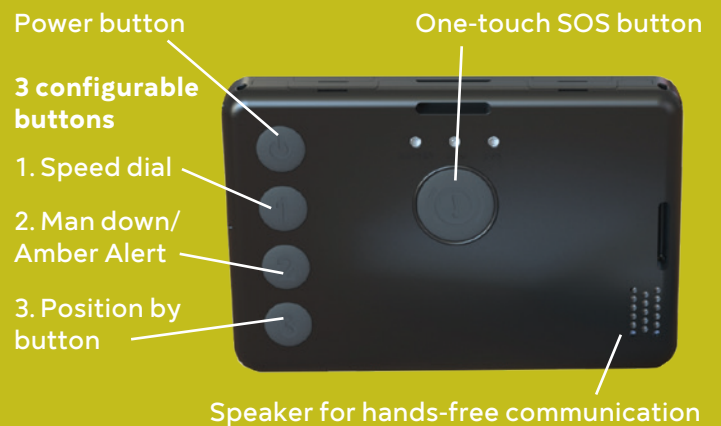

Designed for everyone who performs activity without close or direct supervision by others, the Badge is an autonomous lone-worker solution that combines powerful tracking technology within an easy-to-wear device.

Featuring satellite tracking, mobile and Bluetooth connectivity, the Badge monitors lone-worker well-being, wherever that employee is located.

Satisfying legislation for lone-worker safety and protection, the Badge provides a reliable lifeline for those working independently from a wider team. The Badge has CE and RoSH certifications.

### The device

Easy to use, slim and light in its design, the Badge can be worn on a lanyard or a belt clip, so it is always close to hand. Your company ID pass can be inserted at the front of the Badge.

## Key features & benefits

### Two-way voice communication/ Covert calling

Depending on the risk or the situation, the Badge puts the user in contact with a real person. If a fall/man-down is detected, the Badge can be set to use auto answer, hands-free mode, ensuring contact and continued safety in times of crisis.

### Configurable buttons

Located at the back of the device are these 5 buttons:

- Power button
- SOS/Emergency button
- Speed dial
- Turn Man down or Amber Alert on or off
- Send a location update/proof of presence

### One-touch SOS button

A manual SOS alarm allows an employee to discreetly alert the monitoring centre if they find themselves in a potentially dangerous situation.

### Automatic Reporting

Set service GPS location interval (cycles). The Badge automatically reports its position to the Oysta platform providing real-time and travel history.

### Optimise workforce management

See the location of all team members in real-time, to enable quick decisions on staff deployment and to flag any gaps in service provision.

### Profile configuration

As situations or risk level change, profiles can be constantly updated, to allow maximum lone-worker safety and protection.

### Showerproof

Resilient to humidity and light rain, the Badge is suitable for all working environments.

## The IntelliCare platform

The Badge provides huge benefits to organisations and their high-risk workers, thanks to Oysta's powerful IntelliCare platform.

Using the Badge, staff have the means to check-in, communicate in routine situations and call for help in emergency situations. IntelliCare collects and presents this live intelligence providing insight for management teams.

Using the IntelliCare platform, managers of lone workers can:

1. Accurately see the location of the employee, now or over time, view check-ins, initiate a call or update devices
2. Generate reports and graphics by time and over some or all lone worker devices, thanks to the detailed information that IntelliCare collates.
3. Set Safe / No-Go zones to wherever the individual is working: indoors or outdoors, locally or remotely, alerting them to any anomalies to location or routine.
4. Manage and monitor device usage and activity to ensure assets are being used
5. Stay SLA compliant by documenting presence, check-ins and paths followed.

SPECS	
Size	93 x 64 x 10 mm
Weight	80g

FEATURES	
IP Rating	41
Speaker	Yes
Microphone	Yes

TECH	
Signal	2G
GSM Freq.	Quad-band 850 / 900 / 1800 / 1900 MHz
GPS	GPS, GLONASS, GALILEO, BEIDOU, SBAS, QZSS, DGPS
Battery	1050 mAh Li-Ion battery
Operating temp	-25°C - +65°C
Display	4 LED
Sensors	Accelerometer, Gyroscope
