

OYSTA

Oysta on Hand

- One-touch SOS Button
- Auto-answer & loud speaker
- GPS "Safety Zones"
- Two-way voice communication
- Status alerts
- Reminder messages

Introducing 'Oysta on Hand'

The Oysta on Hand is the latest in mobile telecare safety. The watch features sophisticated tracking and communication for the VIPs safety.

If lost, distressed, or in need of help, the VIP wearing the Oysta on Hand can easily trigger an alarm call to a monitoring service or a designated Carer. The call handler can talk to the VIP over the powerful loudspeaker and microphone included within the Oysta on Hand to assess if any assistance is required.

Oysta's IntelliCare platform will enable call handlers to check on the VIPs location, to enable help to be sent directly to them. Including reminder and check-in functions, the Oysta on Hand enables regular contact to help avoid potential risk.

Oysta on Hand is designed for vulnerable people who:

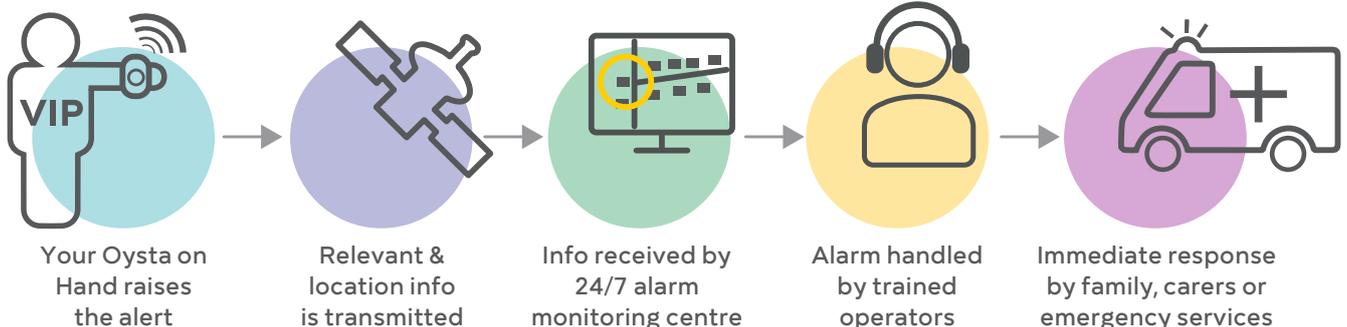

- desire to keep their freedom and independence
- prefer to use a wearable device
- want protection inside and outside of their home
- need a simple way to call for assistance
- wish to reassure loved ones or Carer
- want to ensure someone can find them if necessary

Worn like a watch the Oysta On Hand is the ideal solution for people who would prefer their personal alarm to be discrete and within easy reach at all times.

Less likely to be forgotten when you step out of the door, the Oysta on Hand works whilst the VIP goes about their usual business.

Functioning just like a regular watch, its easy to forget that the Oysta On Hand is working 24/7 to monitor well-being and location. GPS functionality means that via the Oysta on Hand, a VIP can be located and assisted wherever they may raise the alarm from.

Featuring two-way voice communication, when an SOS is triggered, the VIP can speak to a friendly voice.

Key features

All-In-One

The Oysta on Hand is not only a digital watch with time, date and day display; it allows two-way communication just like a mobile phone (with speaker and microphone) as well as accurate GPS location data. This ensures that wherever the VIP is, safety is always on hand.

One Touch SOS Button

If the VIP is in distress, or just needs peace of mind, they can press the SOS button to get help quickly. Oysta on Hand sends the VIPs location and details, to their chosen monitoring centre or Carer and automatically starts a voice call, so they can let someone know what's wrong.

Safety Zones

Create safe zones to monitor movements, sending an alert to the care network if the VIP leaves or enters defined areas within defined or general timeframes. For example, an alert could be raised if the VIP leaves home after dark.

Reminder messages

Simple messages can be pre-set to send to the Oysta on Hand, reminding the VIP of important tasks. This functionality makes the Oysta on Hand a useful tool to manage daily living.

Low battery alert

When the battery on the Oysta Help on Hand is running low, an alert will be sent to the VIP and flagged with the care network. This helps to ensure that daily recharging is happening, so that the VIP is always within the Oysta cloak of care.

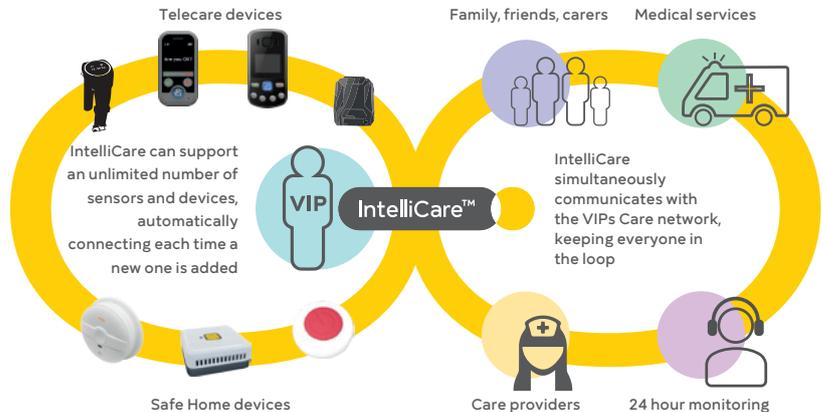

Two-way voice communication

Enabling the VIP to speak to a real person when they are feeling distressed, the Oysta Help on Hand features two-way communication functionality to provide reassurance and a more personal approach to care.

IntelliCare the power behind the Help on Hand

Oysta's mobile telecare solutions are all supported by IntelliCare, Oysta's intelligent cloud-based platform.

Reliable and powerful, IntelliCare allows every home sensor and personal device to communicate independently. Managing alerts and communications for the VIP, IntelliCare collates the data generated by the telecare solutions, to provide the care network with a clear picture on the VIPs well-being.

Oysta on Hand

SPECS	
Dimensions	38 x 35 x 15
Weight	58g

FEATURES	
IP Rating	IP66
Speaker	Yes
